

# Project Brief

## Anticipatory Response for South West Monsoon Flooding

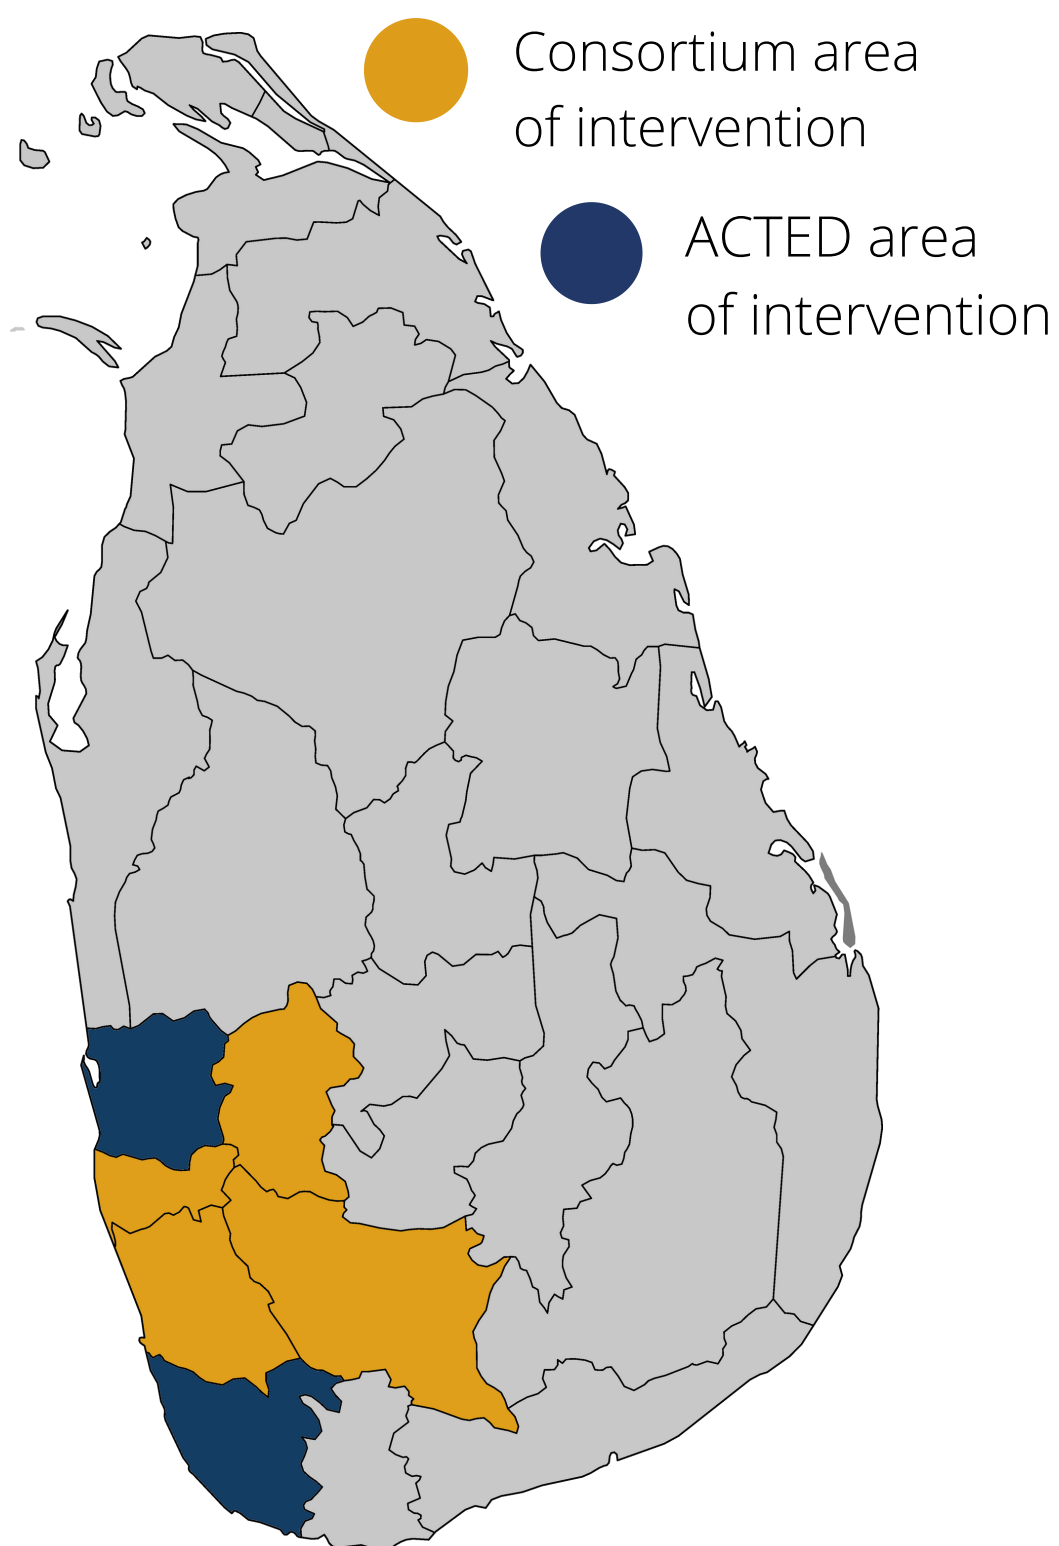

Through a multi-hazard approach, this 45-day project supported the **preparedness of front-line government officials for the South West Monsoon season in the context of COVID-19**. With communities expected to take refuge in safety centres managed by the local government, it was crucial to equip these centres with essential resources to **mitigate the expected impact of heavy rains, and resulting flooding and landslides, on vulnerable families while also preventing the spread of COVID-19**.

ACTED, Oxfam, Save the Children and World Vision Lanka collaboratively **distributed hygiene packs and camp management kits** in Ratnapura, Kalutara, Kegalle, Colombo, Gampaha and Galle districts.

## Objective

To support the preparedness of local government and communities in the face of the South West Monsoon season and COVID-19

## ACTED's results

- Distributed camp management kits to 44 planned safety centres
- Provided hygiene materials to 1,719 front-line public officials
- Supported 1,510 vulnerable households through the provision of hygiene materials
